Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Ricky Sloan

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Marlene Henry

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Bronx, NY 10468

Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Nathan Nielsen

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Bradenton, FL 34202

Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Thomas Atherton

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

To whom it may concern,

PLEASE DO NOT ALLOW MILLENNIUM TO PUT COAL DUST INTO THE COLUMBIA RIVER. We must all keep working hard to keeo as much pollution out of our country as possible. The earth itself simply must be protected and not befouled.

It is just common sense to stop using dirty fossil fuel as much as possible, as soon as possible, and to aim for use of clean and renewable fuel sources. China is doing just that. Using sun and wind, etc. In the past they've allowed some horrible pollution in their country that possibly cannot be cleaned up. Please, please do not allow that to happen here.

Please do all you can so that we remain Good Sherpherds of Mother Earth. God himself gave us this command. Please live up to itl. Ruining our green earth to profit some people or possible save jobs is just all wrong. Demand for coal in the rest of the world has gone WAY down for many reasons. We shouldn't be the backward cousins still using dirty fuel when there is no good reason for that.

Thank you,

Georgia Gamble

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

J. B. Justo 2681
Buenos Aires, ot 01414

Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,
Columbia River integrity and viability.

Even on the other side of the world, people are watching as the USA unravels as a responsible citizen of the planet. So many American rivers have become industrial cess-pits. For several decades some attempts have been made to pull back from destroying surface and ground water sources. The Columbia River is a test case. Please, do not betray your children and grandchildren (if they are to survive), by contributing to the total failure of air and water systems on which all living things depend.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Do not become part and parcel to Trump's Fascist agenda to destroy the environment and eventually the earth to benefit Big Gas, Oil, Coal, Ag and Timber so they can make a dirty buck.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

To whom it may concern,

Come on! It doesn't take much common sense to see that these coal trains are a disaster waiting to happen. How can you people not see that coal is dead? If you really want to do something for the USA, and I assume that is why you got into public service in the first place, do the RIGHT thing, stop allowing coal to ruin our future and work towards a future of renewables. Your grandchildren will thank you.

Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Carol Young

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Will H

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the TERRIBLE 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Mary Ricketts

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Dr. Barbara Kidd-Hoffmann

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

If an industry generates waste, the cost of doing business must include safely securing it without causing detrimental effects to others. As an individual homeowner, I am not allowed to contaminate or otherwise damage adjacent properties. Why then should a large, wealthy corporation have any less responsibility?

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

It is unthinkable that the State of Washington would even consider allowing the pollution of the Columbia River with coal-dust dumps. Years ago a relative moved to your state and chose to stay because of its beauty. In those days wide-scale pollution was unheard-of.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

In case you were woefully unaware, there is ONLY A FINITE AMOUNT OF CLEAN WATER! To let coal dust or ANY OTHER POLLUTANTS be dumped into the Columbia River is one of the MOST IMMORAL TRAVESTIES THAT CAN BE ALLOWED!!! THERE IS NO WAY THIS KIND OF HORRIFIC POLLUTION CAN BE ALLOWED, NOT UNLESS YOUR GOAL IS TO POISON AND KILL THE PEOPLE, WILDLIFE, PLANTS THAT GET THEIR WATER FROM THIS SOURCE!!!!

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities. We need to be ratcheting down oil and coal and switching to cleaner forms of energy.

Finally, no company should be given permission to pollute. We do not need to protect dying industries (or industries that should be dying), just the people in them (with safety nets such as unemployment compensation, bankruptcy, and job retraining programs).

Please protect the Columbia River for all who use it.

Thank you,

Deborah Miller

Redwood City, CA 97068

Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Washington Department of Ecology
WA

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

I am writing from BNSF's Blast Zone just north of downtown Seattle to urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Right now, dozens of trains already travel daily along the fragile Wshington State coastline and interior streams, releasing toxic coal dust and stressing antiquated equipment and bridge crossings. These mile-long trains also cut communities in half, and travel near schools, hospitals, and emergency facilities in many small and larger towns.

Ecology has received unprecedented expert testimony from Tribes, the state, and from federal agencies, impacted communities, and the people of the Pacific Northwest stating that it is imperative to deny Millennium's proposal. Based on this record, we urge Ecology to DENY the 401 certification.

There is no reason our state should permit its responsible environmental and social policy to be destroyed by the unaccountable private corporate interests pushing for the proposed Millennial terminal.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The proposed project also flaunts its ignorance of dangerously accelerating climate change and of our region's commitment to combat its devastating impacts to our irreplaceable environment.

Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are not only crude, coarse, and objectionable -- but they also dangerously conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge you to REJECT the 401 certificate for the proposed Millennium terminal,

There is no Planet B.

Than you for considering my comments.

To whom it may concern,

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

To whom it may concern,

The time to use coal for energy is past. It is a dirty, filthy, unhealthy energy resource. It is time to put our money and minds into further developing clean renewable, energy resources like wind, solar, algaie, tidal etc.

I urge Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

I live on the Multnomah Channel, parallel to the Columbia River. I canoe and kayak it regularly . I see the pollution that already exists there an how it adversely impacts the rest of the environment. The railroad tracks that parallel the river are old and untrustworthy. Overturned trains are not unusual. Please do not allow coal to further pollute this wonderful land.

Thank you for your consideration.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Thank you,

Anita Watkins
