Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

patricia manos

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Caroline B. Miller

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Sharon Cloninger

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Jerome Barber

The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Coralie Russell

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Michael Kenney

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Eric Hunter

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

T E

The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

michele winter

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Kathy Bouvier

The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Debbie Woodruff

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Del Allen

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Barry Robinson

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Kathy Wilson

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

John McKenzie

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Emma Grogan

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Jonathan Baker

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Daphne Dodson

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Layne Hy

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Margo Cuisinier

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Pam Bouroncle

The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Kellie Nelson

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Karen Diederichs

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Rhiannon Maher

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Walter evans

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Irene Gnemi

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Cathleen Cowles

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Douglas Taylor

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Gail Travers

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Renay Reato

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Nathan Vogel

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

richard saltsman

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Barrie Lee

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Lisa Adams

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Cynthia Williams

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Lisa Krausz

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Terry Scoggins

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Theresa Nix

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Christina Digiallonardo

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Bettina Spaeth

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Isabel Freeman

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Ryan Scorby

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Mary Gleason

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Alan Gerber

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Gale Erbe

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Prof. Oliver Townsend

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Martha Turobiner

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Jim Lieberman

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Denise Serylo

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

clare rizzo

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

David Chatfield

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

David Irons

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Arturo Beyeler

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Terry Felts

The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Essey Molla

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.
