Emily Kim

Which aspects of the proposed community project are most important to you? Select all the areas that you believe should receive careful consideration during project planning and implementation.
Public health and safety
Noise and air quality

How would you describe your overall level of support for the proposed community project, considering its expected benefits, potential environmental impacts, and effects on nearby residents?
neither support nor oppose

To what extent do you believe the information currently available about the proposed project is sufficient for residents to understand its objectives, anticipated benefits, and possible long-term consequences?
100- completely sufficient

Please indicate how important each of the following considerations should be when evaluating the proposed project, determining appropriate safeguards, and deciding which improvements should be implemented before the project proceeds.
Protection of local wildlife: Slightly important
Reduction of traffic congestion: Slightly important
Control of noise and dust: Not Important
Protection of water resources: Not Important
Transparency in decision-making: Not Important

Please rank the following potential project outcomes according to how important they are to you, with the highest-priority outcome ranked first and the lowest-priority outcome ranked last.
1. Protecting the natural environment
2. Improving local infrastructure
3. Creating economic opportunities
4. Maintaining public health and safety
5. Addressing residents' concerns
6. Ensuring long-term sustainability

How frequently would you prefer to receive project updates so that you can remain informed about construction progress, regulatory decisions, upcoming meetings, and changes that may affect the surrounding community?
Daily
