Deny the 401 certification for Millennium coal export proposal

Rachel Heath

301

Portland, OR 97214

July 13, 2017

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

Rachel Heath

Dear Washington Department of Ecology,

The letter below has relevant information, and I would only add: It's simple. We need to stop using fossil fuels as quickly as we can. And that only happens when we turn all new efforts and investments away from them.

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

We must start STAT to plan for Cleaner cargo. If not no, I fear it's never.

As a Registered Nurse (Retired in WA) I have studied the many health hazards of coal, and hope Jay Inslee will stop the coal trains and Methanol, too. As I read the Emergency Response & Health and Safety Data base for Methanol and hate to picture the extreme, but real dangers to those workers and to families, either. You know we need a strong air pollution and water pollution effects study for long term, not to placate Dirty Energy owners!

Sincerely, Thank-you for cleaner choices

Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

Adina Parsley

July 19, 2017

Dear Washington Department of Ecology,

The Millennium Coal Export Terminal proposal should not be able to get a 401 certification. With coal dust containing metal such as mercury being shed by the ton, this terminal would make attainment of water quality standards and protection of beneficial uses such as healthy, mercury-free fisheries impossible. There are already too many coal trains along the Columbia River, and this terminal would greatly increase both the number and the risk of a derailment. The Department of Ecology must protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that are crossed by or downstream of BNSF rail lines. BNSF recently lost a CWA lawsuit due to coal dust constituting an unpermitted point source of coal dust pollution. Based on the record, and the scientific testimony of many parties, I ask Ecology to evaluate the science and monitoring data thoroughly and then deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

Sincerely,

Joshua Seeds

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

Nathan Jackson

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

dody h

Dear Washington Department of Ecology,

These fossil fuels represent dying industry and outdated technology. We are moving to the renewable/clean energy future. These facilities, if built, will soon be obsolete.

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Sincerely,

Marilyn Epstein

Dear Washington Department of Ecology,

I object to the Millennium Corporation's continuing attempt to foist upon Washington State a coal export terminal at Longview on the Columbia River. We the people have told them over and over with thousands and thousands of letters we residents of the Columbia Gorge do not want this polluting coal export terminal. Do not allow their 401 certification to pollute southern Washington and the entire Gorge. Deny it over and over again. It makes no sense. Thank you.

Also, I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Portland, OR 97218

July 14, 2017

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

James Nielson

Dear Washington Department of Ecology,

It is immoral of us to send our pollutants anywhere. They should be kept in the ground. If we send our coal to Asia, what kind of statement does that make about our stance on Global Warming. It certainly does not indicate that we care, nor that The Great USA is a leader in combating climate change. We should be ashamed of ourselves that we have sent any coal overseas.

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Dear Washington Department of Ecology,

I live within the Columbia Rvr. Gorge Scenic Area and would be immediately, adversely affected by the massive transport of coal close to my property. I strenuously oppose allowing this intrusive project to be sited as proposed.

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

michael drais

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

The City of Longview just issued a report that they will be unable to filter out the silicone from the drinking water. They can't filter out the toxins and heavy metals with coal dust in the water, either, and the drinking water supply is right across the road from the proposed terminal. So forget it, please! There's something like 13 schools within 2 miles of it and they all get their drinking water from under the Coal Terminal, across the street.

Also, parking a bunch of trains on top of the aquifer only 3 - 5 feet down would cause the trains to sink into Longview's drinking water supply. So, you see, a clean water permit is out of the question as a major threat to public safety.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Dear Washington Department of Ecology,

The Department of Ecology must deny the 401 certification of the Longview Millennium's coal export project.

Coal is a an energy source of the past. If future generations have any chance of surviving the climate crisis being caused by the burning of fossil fuels, we've got to stop building up the coal infrastructure. Really. Would you approve building a whale oil processing plant at that location? No, because no one uses whale oil any more. Eventually, burning coal will also be a thing of the past, and good riddance to it.

Shipping coal to other locations on the planet makes no sense. Wherever it is burned, it adds CO₂ to the atmosphere, our atmosphere. We only have one atmosphere, and I'd like to save it for the children of the future. Now is the time to stop this madness!

Sincerely,

Carol Majewski

Dear Washington Department of Ecology,

Do NOT do this!! No No No

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

Robert Hodges

Deny the 401 certification for Millennium coal export proposal

James Waddell
7806 SW Village Greens Circle
Wilsonville, OR 97070

July 13, 2017

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

James Waddell

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving

local economies, clean water, clean energy, and healthy communities.

I am very concerned about this project's impact re: train/ track safety and the possibility of train derailments along the Columbia River. In addition to the near disaster near Mosier, there was a recent

Amtrak derailment near Tacoma! I frequently take Amtrak to Seattle and have recently experienced delays. Increasing dirty fossil fuel exports by train, on already crowded tracks, threatens not only water quality but the health and safety of living things nearby.

Sincerely,

Jonnel Covault

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

jean Stupek

Dear Washington Department of Ecology,

I am writing to urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area, which would be harmed by Millennium's coal trains.

Dept. of Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Dept. of Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combatting the devastating impacts of climate change. Millennium's proposals are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Yours Sincerely,

Daniel Jaffee

Dear Washington Department of Ecology,

I urge the Department of Ecology to be opened minded when working on whether or not we allow Trains to transport Coal through the Columbia River Gorge. There are so many misconceptions running around currently with regard to the Coal dust that is polluting our Beautiful Gorge area. This just isn't true. It was about 5 years ago when a gentleman, shared at a community Business how he had found 2 inches of coal dust along the tracks running both on the North and South side of the Columbia River Gorge. Well, at that point I set out to do some checking of my own. The following is what I found and learned.

I do a great deal of hiking from Vancouver, WA east to the Lyle, WA area. I made it a practice after hearing this person to note my findings. I even checked with some BNSF employees what it was like when the Coal was loaded into the Railcars for transport.

1) I was told that when the Coal is loaded it is sprayed with a syrup substance to keep dust down. 2) My own finding while hiking was that, AT NO TIME DID I EVER SEE ANY COAL DUST OF ANY KIND ALONG THE TRACKS, that run through the Columbia River Gorge.

As for climate change, well I had to be blunt, but Our Planet Earth is a living Planet. The Earth goes through cycles just as a Women does. Our Climate swings every time we have an Earthquake, Mt. St. Helen or another Mountain goes up. Back when we had that year with so many earthquakes around the Pacific Rim I remember a Geologist share that after the Quake down in New Zealand we had a 6 degree shift at both the North and South Poles. Now that could have very well made changes to our climate.

I could go on but I wont. I do think you needed to know that there are those of us who have done our Homework to see if what has been said is true or not.

You want my vote. Vote in favor of letting the coal travel through my community of Washougal, WA!

Sincerely,

Elizabeth A Stiles

Beaverton, OR 97007

July 14, 2017

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

Maria White

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

beth finn

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

Jan McCreary

Dear Washington Department of Ecology,

The last thing WA state should be doing is allowing a huge coal export terminal to be built right next to the Columbia River. In this day and age of climate change, we should moving away from coal towards clean energy. More and more countries are doing just that, so why is the US digging its heels in to increase coal output when fewer and fewer countries will be buying it? Not to mention that putting a huge coal terminal next to the Columbia River will destroy the area with toxic coal dust. The vast majority of people in WA state do NOT want a toxic oil terminal built that will keep us addicted to dirty, climate exacerbating coal. NO MORE COAL - DENY MILENNIUM'S PROPOSAL FOR 401 CERTIFICATION!

The Department of Ecology needs to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. July 20, 2017

Dear Washington Department of Ecology,

I urge the Department of Ecology to protect water quality along the Columbia River, including the Columbia River Gorge National Scenic Area and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's project. Based on this record, we urge Ecology to deny the Clean Water Act Section 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses, and contravene Washington's antidegradation policy.

The project also conflicts with our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest as the coal export capital of the United States are inconsistent with the public's interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

Marianne Larkins-Strawn
