

Jennifer Calvert

I am urging that the Millineum Bulk Terminal building plans be stopped immediately. Building the terminal means that coal trains will increase in number going through my town of Spokane as well as many other vulnerable towns along the railroad's route from Montana through Idaho and Washington and Oregon. There is NO reason to build a terminal whose purpose is to encourage more coal to be taken out of the ground and transported with danger to the coast and loaded on barges to be taken to Asia and burned there and creating pollution which can only increase the problem of climate change, and all to be done in order for a coal company to make a profit. The risks are too great! Please reject this awful project.
