1	Lynn	Lichtenberg		Everett	WA	98201	Deny 401 certification say no to more coal trains for Millennium coal export proposal	<p>Attention: Loreé Randall, Project Manager</p> <p>I urge the Department of Ecology to protect water quality in the countless streams and rivers that would be harmed by coal trains headed for the Millennium Bulk Terminal facility. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and people across the West to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.</p> <p>Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's antidegradation policy.</p> <p>The project also flies in the face of the region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.</p> <p>Millennium's proposed facility has implications across the West, from coal mines in Wyoming and Montana and through the rail communities to the coast. Water is the most sacred resource in arid landscapes, and must not be polluted.</p> <p>Thank you,</p>
2	larry	mahlis				98115	Deny Millennium permission to pollute	<p>Attention: Loreé Randall, Project Manager</p> <p>I urge the Department of Ecology to protect water quality in the countless streams and rivers that would be harmed by coal trains headed for the Millennium Bulk Terminal facility. 7	Don	Kelley	12637 Merritt-Estes Rd.	Deadwood	SD	57732	No 401 certification for Millennium coal export proposal I urge the Department of Ecology to protect water quality in the countless streams and rivers that would be harmed by coal trains headed for the Millennium Bulk Terminal facility. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and people across the West to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification. Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's antidegradation policy. The project also flies in the face of the region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities. Millennium's proposed facility has implications across the West, from coal mines in Wyoming and Montana and through the rail communities to the coast. Water is the most sacred resource in arid landscapes, and must not be polluted. Thank you,
							Dear Loren Randal, Project Manager I write in strongest opposition to any permit for the "Millennium Bulk Terminals Longview" coal terminal at Longview, Washington. This terminal would constitute an ecological disaster at every step in the life-cycle of the coal, from its mining, through transport, to combustion in its intended Chinese power plants. The Longview export terminal frustrates the maintenance of a planet that can sustain human life, and serves no other valid purpose, and must therefore be rejected by the Department of Ecology. This project is one of five such export terminal proposals that would export on the order of 150 million tons of coal through the Pacific Northwest. This volume of coal would constitute an unmitigated ecological disaster, in violent opposition to Governor Inslee's objective, as well as America's existential interest in, reduction of carbon dioxide emissions. DOE must exercise its jurisdiction to keep its portion of the Pacific Coast free of these suicidal coal-export proposals, starting with Longview. The State of Washington has expressed an overall goal of moving toward a lower-carbon economy, and to avoid the worst impacts of global warming. If these goals are to have any meaningful policy expression within the agencies, such as DOE, tasked with carrying out State government policy, then DOE cannot issue this permit at Longview. This terminal would be linked via rail lines and riverine barges to some of the largest carbon bombs in North America, namely the coalfields of eastern Montana and Wyoming, and human survival demands that this coal remain securely underground. The MBTL terminal, and its sister proposals along the Pacific Northwest coast, would be especially and painfully ironic for a pair of states that have otherwise made admirable and meritorious progress in shifting to clean energy and ecological sustainability more broadly. I am a former resident of the Oregon coast (Newport), and I can scarcely fathom the horrific reversal of ecological paradigm that these coal-export terminals would constitute. The Pacific Northwest's role in the global energy infrastructure would invert from a leader in the low-carbon transition, to a conduit of death for the highest-carbon fuels on Earth. I understand the MBTL terminal would convey up to 44 million tons of coal annually, a disastrous setback in American efforts to restrain carbon emissions. The State of Washington has already committed itself to regional greenhouse gas reduction initiatives, and even though the initiatives are not yet self-enforcing, these coal-export terminals would dwarf any carbon reductions attained in those frameworks. To issue any permits for the MBTL terminal would therefore be a contrary and irreconcilable action. Even the smallest scope of environmental analysis, the terminal itself and the proximate impact to the local natural and human environment, shows the MBTL proposal to be grossly unacceptable. The coal shipping traffic through the Columbia River, the local air and water pollution, congestion, and destruction of the community ambiance, would transform the local area into a purgatory of industrial misery. The river ecosystem, whose marine mammals and fisheries are already under severe stress from hydroelectric dams, fishing pressure, and water quality degradation, would face another maelstrom of industrial pollution, noise, and physical displacement. The residents of Longview, and other communities for whom this permit would set a precedent, did not necessarily move there to experience one of America's largest commodity export projects operating more hours than not. Persons wishing a full-time industrial experience have ample other places in America to live, and Longview need not be one of them. Again, please reject any Department of Ecology permits for the "Millennium Bulk Terminals Longview" coal export terminal, and keep the Pacific Northwest coast from initiating a literal "millennium" of global climate catastrophe. Thank you for your attention to this urgent issue.
8	Jim	Steitz	849 Glades Road Apt. 1203	Gatlinburg	TN	37738	No Climate Suicide - Deny 401 certification for Millennium coal export proposal Dear Loren Randal, Project Manager I write in strongest opposition to any permit for the "Millennium Bulk Terminals Longview" coal terminal at Longview, Washington. This terminal would constitute an ecological disaster at every step in the life-cycle of the coal, from its mining, through transport, to combustion in its intended Chinese power plants. 31	Johanna	Wald	845 Ashbury Street	San Francisco	CA	94117	<p>Attention: Loreé Randall, Project Manager</p> <p>I am writing today to urge the Department of Ecology to deny the proposed Millennium Bulk Terminal Facility 401 certification under the Clean Water Act. If this facility is approved by your department water quality in countless streams and rivers will be damaged and degraded by coal trains headed for it and by coal mines that produce the coal that the trains will carry. In addition, air quality along the train routes from Montana and Wyoming to the coast will be polluted and there will be increased traffic, congestion and noise as well. I call upon Ecology to protect residents of Washington and all affected states from these harmful and unavoidable impacts.</p> <p>More specifically, because the proposed project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's antidegradation policy, you must deny it.</p> <p>In addition to the impacts referenced above, I also ask you to consider climate change. We need to transition to a renewable energy economy as quickly as possible, rather than facilitate projects like this one which will ensure continued mining, export and use of coal. Making Washington the coal export capital of the United States is not in the interest of your state, the region, the rest of the country and the planet.</p> <p>Deny 401 certification for Millennium coal export proposal</p> <p>Thank you,</p>

Think about the damage this project will cause to the environment.</p> <p>I urge the Department of Ecology to protect water quality in the countless streams and rivers that would be harmed by coal trains headed for the Millennium Bulk Terminal facility. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and people across the West to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.</p> <p>Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's antidegradation policy.</p>

							<p>The project also flies in the face of the region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.</p> <p>Millennium's proposed facility has implications across the West, from coal mines in Wyoming and Montana and through the rail communities to the coast. Water is the most sacred resource in arid landscapes, and must not be polluted.</p> <p>Thank you,</p>

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's antidegradation policy. The project also flies in the face of the region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities. Millennium's proposed facility has implications across the West, from coal mines in Wyoming and Montana and through the rail communities to the coast. Water is the most sacred resource in arid landscapes, and must not be polluted. Thank you,
73	Alexandra	Amonette	401 Wormser Loop Rd.	Big Timber	MT	59011	Deny 401 certification for Millennium coal export proposal I urge the Department of Ecology to protect water quality in the countless streams and rivers that would be harmed by coal trains headed for the Millennium Bulk Terminal facility. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and people across the West to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification. 156	Arthur	Birkmeyer	2802 Northlake Ave.	Longview	WA	98632	<p>Deny 401 certification for Millennium coal export proposal</p> <p>Attention: Loreé Randall, Project Manager</p> <p>It's a known and admitted fact that tons of coal are lost off the railcars during transport and handling of that coal before it is at its final use destination. A lot of this lose goes into our water resources (rivers, streams, creeks, swamps, wetlands, lakes and ponds) on an ongoing, building up basis causing destructive polluting effects on all those ecosystems. I find this totally unacceptable as a resident, taxpayer and ethical/moral citizen living in the area directly affected by this known source of pollution.</p> <p>Because of this I urge the Department of Ecology to protect water quality in the countless streams and rivers that would be harmed by coal trains headed for the Millennium Bulk Terminal facility. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and people across the West to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.</p> <p>Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's antidegradation policy.</p> <p>The project also flies in the face of the region's commitment to combat the devastating impacts of climate change. 							Attention: Loreé Randall, Project Manager
							I urge the Department of Ecology to protect water quality in the countless streams and rivers that would be harmed by coal trains headed for the Millennium Bulk Terminal facility. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and people across the West to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.
							Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's antidegradation policy.
							The project also flies in the face of the region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.
							Millennium's proposed facility has implications across the West, from coal mines in Wyoming and Montana and through the rail communities to the coast. Water is the most sacred resource in arid landscapes, and must not be polluted.
255	Carrie	Opara				98274	Deny 401 certification for Millennium coal export proposal Thank you,
							Attention: Loreé Randall, Project Manager
							I urge the Department of Ecology to protect water quality in the countless streams and rivers that would be harmed by coal trains headed for the Millennium Bulk Terminal facility. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and people across the West to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.
							Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's antidegradation policy.
							The project also flies in the face of the region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.
							Millennium's proposed facility has implications across the West, from coal mines in Wyoming and Montana and through the rail communities to the coast. Water is the most sacred resource in arid landscapes, and must not be polluted.
256	Jean	Pauley				98112	Deny 401 certification for Millennium coal export proposal Thank you,
