

Ernest Robeson

As a progressive citizen of the State of Washington I do not want our sacred river and habit of many fish and animal species allowed to be degraded with dirty coal and coal dust for the benefit of a few connected with a for profit coal export business. This bulk material will be sent overseas to foreign countries and will come back to us in dirty air and more carbon burned to exacerbate climate change. We don't need it, we won't benefit from it, we must not allow it in our state.
