Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Regards,

Carolyn Ableman

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Regards,

Kenneth Deffenbacher

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Regards,

matt geer

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

As an environmental health scientist and board-certified toxicologist, I urge the Department of Ecology to protect the water quality of the Columbia River and the many streams and rivers that would be harmed by Millennium's coal trains and deny Millennium's proposal to build what would be the nation's largest coal export terminal.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to lessen climate change. Millennium's ambitions conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Sincerely,

Gay Goodman, PhD, D.A.B.T.

Dear Department of Ecology,

I strongly urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Regards,

Art Hanson

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

NO coal export terminal in Vancouver! How many times do we have to say NO??? Coal is a dying industry so why is this terminal even on the table? Who exactly will they be exporting coal to in the future since most other countries are phasing it out and replacing it with clean energy? This terminal would be an environmental disaster for our state as we try to move forward with clean energy that doesn't destroy our air, water, and exacerbate global warming like coal does. NO MEANS NO!!!

Therefore, I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

Please protect water quality in the Columbia River and all the many streams and rivers that would be harmed by Millennium's coal trains. Ecology has received expert testimony from Tribes, state and federal agencies, impacted communities, and folks from around the Pacific Northwest to reject Millennium's proposal. I urge Ecology to deny the 401 certification.

Ecology should deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project is contrary to our region's commitment to combat the impacts of climate change.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Regards,

Carl Olson

A personal note:

Coal consumption in China and India is on the decline. China is becoming the preeminent supplier, installer and developer of solar power. We are focusing here on a losing proposition. Prices are plummeting and soon, if not now, the cost of extracting and transporting this pollutant is greater than the value it holds. Be smart -- bet on the actual future - not the perceived/political future.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Coal is an outdated and dirty form of energy. We in Washington are proud of our clean hydropower, wind and solar. We don't use coal so why should we bear the burden of environmental risk and damage to our treasured resource the Columbia River from coal?

I lived for eight years in the coal country of Buchanan County, Virginia. There is NO such thing as a "CLEAN" coal mining/shipping/depot.

Coal dust goes/gets everywhere. I worked as an analyst for coal and water for one of the coal companies there. Joy (or now Dawn) dishwashing detergents are the only way to get coal dust out of skin. And even though I wore a respirator while working, I can't begin to tell you how much coal dust I breathed just driving and walking on public roads and sidewalks.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

Please deny the Millennium Bulk Terminals 401 certification for Longview. The project would harm water quality and degrade salmon habitat in the Columbia River and tributaries. Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, exacerbate climate change, and contravene the state's Antidegradation Policy.

Thank you for considering my request.

Yours,

Lucy Uhlig

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

We need to phase out coal from our State, National and International energy portfolios. I live less than a mile from intersecting rail lines. Moving coal by rail leaves our communities in the dust, literally. From local to global, we don't need coal. Clean up the Evergreen State's image and stand with the values of our State's citizens to keep Washington green and sustainable.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.

Subject: Deny the 401 certification for Millennium Bulk Terminals' coal export proposal

Dear Department of Ecology,

I urge the Department of Ecology to protect water quality in the Columbia River and countless streams and rivers that would be harmed by Millennium's coal trains. Ecology has received unprecedented expert testimony from Tribes, state and federal agencies, impacted communities, and the people of the Pacific Northwest to deny Millennium's proposal. Based on this record, we urge Ecology to deny the 401 certification.

Ecology must deny the 401 certification because Millennium's project would violate Washington State's water quality standards, harm designated uses and drinking water, and contravene the state's Antidegradation Policy.

The project also flies in the face of our region's commitment to combat the devastating impacts of climate change. Millennium's oversized ambitions to rebrand the Pacific Northwest the coal export capital of the United States conflict with the public interest in thriving local economies, clean water, clean energy, and healthy communities.
