

Karen Baldauski

HELLLLLLLLLLLLLLLLLL-o! And, Good-bye to our natural world if you poison the estuaries. I mean, have you not learned anything....more poison is not the solution. Restoring a balanced environment naturally is the ONLY way to go. Get rid of the stressors in the feeder streams first. Avoid more contamination of our estuaries and bays. Imidacloprid means death to ecosystems...AND OUR HONEY BEES. I mean really, doesn't anyone have a broader view of things to not stand for any more usage of chemicals others have already outlawed?!

Thank you for your consideration, as I agree with Beyond Pesticides rationale which they put forward so succinctly in this letter to you.
