10/24/17

I am disgusted thinking about our beloved state allowing a pesticide I use as a flea medication on my dogs on shellfish beds. I would never buy shellfish from Willapa Bay or Grays Harbor if this is allowed. I would never feed my family flea medicine. On top of it this pesticide kills honey bees. What the hell? Why is this even being considered? The shellfish growers have plenty of money and need to figure out an alternative. Ecology shouldn't even be considering allowing poison being sprayed on our seafood. I am not in support and hope Ecology denies this application.

McMENAMINS EDGEFIELD 10/24/17

Troutdale, OR · mcmenamins.com

A signpost at McMenamins Edgefield points the way toward a variety of fun destinations, like the onsite theater and Power Station Pub.
