To Wa. State Dept. Ecology

Please deny the use of imidacloprid in Willapa bay & Grays Harbor. The long term affects are unknown and there are too many herbicides, pesticides and numerous toxic chemicals in the environment and oceans that are getting into our food chain. The affect on all aquatic life is unknown. As an example, Imidacloprid is a form of neonicotinoids which have been associated with bee colony collapse and even found in our food honey.

Thank you for your consideration

George Fairfax MD
