

## Josehp Caler

The idea that another industry could wipe out a Species like the sand shrimp and poison the individuals like myself who enjoy eating oysters is horrible. First off there is a market to sell sand shrimp. Pump them and sell them to fishermen. Second look at what is happening around areas on land sprayed with pesticides, like hoof rot. Until impacts are know nothing should be sprayed.

I will not support any place that uses this pesticide at all. Do the right thing and ban the use of it.
