

Seattle Public Utilities

The suggested changes noted below reflect recent practice and would be good to include in the regulations so that they are more visible and permanent:

173-166-050(1): Add "large municipal water suppliers" as another example of a source of water supply information.

173-166-030(10): Expand as possible participants on WSAC those water suppliers affected by the drought and drought response.

173-166-050(4): May want to allow for other (substitute) or additional forms of public notice other than newspapers that would be more effective at informing the public of the declaration.

Thank you for the opportunity to comment at this time.
