

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Eleanor Dolan

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Mike Kelly

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Nikole Black

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Caitlin Jackson

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Mark Trumbull

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Taylor Reed

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Debbie Hunter

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jerry Kranz

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Carla Miller

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Michael C

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jennifer Hauge

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Tami Palacky

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Amy Chisholm

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

nan matthews

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Megan Davis

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Denise Walton

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jose Leroux

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Frank Sennett

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Ralph Tucci

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

henry sanchez

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Alison Stolpa

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Douglas Cooke

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Kristi Stathopoulos

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Gina Sheridan

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

ali son

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

William Hayes

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Douglas Taylor

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

joseph joyce

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Timothy Callahan

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Dear Ms. Jankowiak:

Thank you for your diligent work to designate Puget Sound as a No Discharge Zone. The Pacific Northwest is the only region in the nation that has not yet designated No Discharge Zones for any of its waterways. And yet Puget Sound is a beloved national treasure.

Puget Sound and its tributaries are threatened by many sources of pollution. And while no one source is solely responsible for its water quality problems, all of the sources add up. Establishing it as a No Discharge Zone would keep the Puget Sound waterways clean, protect the public health, and protect sensitive marine waters and important shellfish harvesting areas.

I strongly support the establishment of a Puget Sound No Discharge Zone. Thank you for your hard work.

Sincerely,

Michael Greene

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Edwin J. Rodriguez

Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Chelsea Dastolfo

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

jeff halderman

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

jolly hibbits

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Melodee pattee

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Donna Alleyne-Chin

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Rebecca Chan

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Robert Herzog

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

donna ehret

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Patrick Hook

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Holly Taylor

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

D K

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Alan MacLamroc

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Kristy Bragg

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Loree Kramer

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Francesca Rector

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Ibrook Tower

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Sylvain-Paul Côté

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jeffrey Arnold

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Mary Nordkvelle

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

shellie krick

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Linda Meola

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Margo Ross
