Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Renée Maes

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Donna Mohr

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Liam Canavan

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Kristin Campbell

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Diego Pedraza Lahoz

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Chris Abery

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Ann Berndt

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Maureen Hodgson

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Judy Bell

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Susan Thing

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Michael Sheffield

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Christy Giesick

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Bruce Higgins

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Ronen Hartfeld

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Deb Rybovich

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

isa gucciardi

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Erin Kruger

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Greg Burnet

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Rachel Doherty

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Doug Shepard

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Michael Carver

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

LARRY DAY

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Britton Davis

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Suzette Miller

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jessica Baker

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jerome Schneider

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Christa Romppanen

Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

C J Uhlir

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Curtis Hageland

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Elke Hoppenbrouwers

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Linda Carter

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Raela Hulett

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Louis Cortese

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

D Sizemore

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Kristen Potter

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Lew Douglas

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jan Ackerman

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Mora Main

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Marie Andersson

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jerry Legas

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

EILEEN DECKER

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Kokyo Henkel

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Paul Scott

Puget Sound NDZ

Dear Ms. Jankowiak:

The Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I support the Department of Ecology's proposal to establish the Puget Sound No Discharge Zone.

A No Discharge Zone as proposed in your report would protect public health by keeping our waters clean. It would also protect sensitive marine waters and protect important shellfish harvesting areas.

Puget Sound and its tributaries are threatened by many sources of pollution, and while no one source is solely responsible for all of the Sound's water quality problems, each source should be addressed.

I support your proposal for establishing a Puget Sound No Discharge Zone.

Sincerely,

Gay Goodman, PhD

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Dennis Branse

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Dale Allen

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jay Stryker

Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Don Waldron

Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Sara Rathfon

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Donna Davis

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

lindsey richter

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Matthew Emmer
