

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Martine Cimon

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Caryl Speck

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Annabelle Van Dyke

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Susan Kenning

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Betty Goller

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Sheryl Lee

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Hamada Yehya

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Leo Sandy

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Vicky Anderson

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Zebulon Krichten

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Joyce Mitchell

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Lynne Teplin

Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Gordon Seyfarth

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Michael Gilmartin

Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Christina Whiteman

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Protect our fragile marine ecosystems! To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

C Borromeo

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Wendy Fossa

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jennifer Edelen

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Robert Hansberry

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Dana Craig

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Beverly Golden

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Beverly Phillips

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Sheri Spain

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

karen jablonsky

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

CW Savitzky

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Teresa Giles

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Lisa LaPerla

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Chris Osborne

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone. It's only common sense that waterways, especially large, heavily used ones like Puget Sound, should be kept as healthy as possible.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Melanie Roberts

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jamie Beckett

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Cheryl Eames

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Kay Randall

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Randy Koch

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Walter Fox

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Carol Sidel

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Joyce Morimoto

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Theresa Epp

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

David Meade

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Kurt Fratzke

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Paul Solomon

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

jack green

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Karen Haibeck

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Craig Fortier

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Jonathan Tholl

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Melissa Reid

I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Dana Thompson

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Brandy Horne

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

J Hilton

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Emily Gage

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Mazen Jishi

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

James McAndrew

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

Puget Sound NDZ

Dear Ms. Jankowiak:

Thank you for your hard and diligent work to evaluate the criteria to designate Puget Sound as a No Discharge Zone. Based on your study, I believe that Puget Sound is poised to join other iconic waterways across the United States as a No Discharge Zone.

To date, the Pacific Northwest is the only region in the nation that has not designated No Discharge Zones for any waters. Puget Sound, a national treasure, needs this type of protection. I fully support Department of Ecology's determination and proposal to establish the Puget Sound No Discharge Zone.

This simple and common sense approach will protect public health, keep our waters clean, protect sensitive marine waters, and important shellfish harvesting areas.

Fortunately, over 97% of boaters already do the right thing -- they have holding tanks onboard to store sewage (also called blackwater), then pump it out using any one of the 100 designated pumpout facilities that are available throughout the Puget Sound.

I support establishing a No Discharge Zone because of the critical protection it will provide to the people, marine creatures, and water quality of Puget Sound. Puget Sound and its tributaries are threatened by many sources of pollution and while no one source is solely responsible for the Sound's water quality problems, all of the sources add up. It is time to address ship pollution in order to help Puget Sound recover the health of its ecosystem.

Again, thank you for your hard work and I strongly support the establishment of a Puget Sound No Discharge Zone.

Sincerely

Patricia Canha
