I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Lanie Cox

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Robert Rusher

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Maureen Rawlings

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives. Puget Sound should never be used as a cesspool!

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Bruce Tipton

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Tim Emineth

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

ART GREENLEE

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Jill Walton

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Roy Treadway

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

David Cosby

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives. No body of water can continually absorb pollutants and forever support aquatic life. It is cheaper to keep a body of water clean than to try to mitigate decades of damage.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Ron Reed

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Paula Chuka

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Jerry King

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Lauri Sweeney

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Nancy Breckenridge

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

The words below explain why I'm signing this petition. The truth is, I don't understand that we have to do this now. I understand that before people knew better, discharging effluent anywhere didn't seem to be a concern. We know better now, and have for years. Please regulate that there be a no discharge zone in the Puget Sound.

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

David & Judith Laws
1718 Valencia St

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Svein Seljeseth

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Michael Carver

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Doug Swanson

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone. And even if it didn't, wouldn't it be better to just build more capacity rather than to dump poop into the Sound? Really, we can do better than that!

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Andrea Gunning

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Jeffrey Wong

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Kenneth Jones

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Cecile Ervin

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

William Lloyd

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

E La

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Nancy White

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Mark Wirth

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

The recent news about sewage discharges into Puget Sound has been a travesty and is totally unacceptable in an ecologically aware area like this one.

I strongly support a No Discharge Zone for Puget Sound and Lake Washington.

Everyone needs to do their part to protect our fragile environment, and boaters are no exception.

I urge you to designate Puget Sound a No Discharge Zone.

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Charles Greenberg

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Maureen Hildreth

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Ray Foster

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

JJ L.

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Susan Lepore

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Tobey Nelson

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Mary Cooke

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, the Salish Sea, Lake Washington and the associated waters.

We live in such a beautiful place, filled with wildlife. And yet the health of the wildlife in the Salish Sea is in trouble. just one example, our Orcas are having difficulty finding enough food. Increased pollution from sewage in the water must be avoided for the health of our waters and their inhabitants.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Thank you in advance for saying no to sewage in the Salish Sea.

Sincerely,

Ruth Richmond

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

D C

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Rebecca Lee

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Kimberly Mcdonald

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Shannon Sorem

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Michael Faoro

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Loretta Sylvestre

Dear Washington Department of Ecology,

Allowing boats to dump sewage into our waters is disgusting! As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Marjorie Fields

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

This measure should have been passed years ago. It's a logical ecological no-brainer for everyone living in the greater Puget Sound area. As a resident of Washington State, friend to so many who live there, and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one doesn't have to be a nearby resident on any of its shorelines to know that that it is much more than crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We must address all the myriad sources of pollution to Puget Sound. Far too many people pollute it without a second thought and it is too late in the game now. We must act to quickly restore its health. Support designating Puget Sound as a No Discharge Zone now, since delaying for years to come will result in a complete loss for the State of Washington at large, and all of its shoreline residents in particular.

Tom Donaldson

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Scott Duncan

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Kristina Fury

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Heidi Madden

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Karen Frazier

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Jo Harvey

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Stan Barnes

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

Of course, improving the existent

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Stan Lindskog

Dear Washington Department of Ecology,

i am a washington state resident, and i had no idea that people were still allowed to dump sewage - raw and treated - into the puget sound. that is so horrible and disgusting.

i fully support a no discharge zone for puget sound, lake washington and all waters here in our state. we have the sewage pump-out facilities, and if we need more, we should provide more. just like i pay for sewer at my home, boaters should have to pay for that service to support the employees and possible addition of more facilities.

i understand that the vast majority of local boaters already support a no discharge zone, and it is long overdue that we designate our state waters as no discharge zones, and the penalties for discharging should be high.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Alisha Leviten

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Charlene Welty

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Daniel Arnold

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

David Stetler

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Robert Camar

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Niele Gillooly

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Erika Smith Macdonald

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Christine Brown

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a life time resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the maximum respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Barbara Fay

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Thom Peters

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now.

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Allan Davis

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Suzann Bailey

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Shondra Bingaman

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Dolores Wiens

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Desirae Golis

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Craig Michaelis

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Ted Pratt

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Ryan Bollman

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

I live on Puget Sound and do not dump my sewage into the Sound. No one should be allowed to dump untreated sewage into the Puget Sound. This is one of the most beautiful and special bodies of water in the world. We should do everything we can do to keep it clean and healthy for natural life, for ourselves and for those who will come after us.

Please do not allow waste discharge into the Puget Sound.

Thank you,

Robert Alexander

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Jill Wollman

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Shannon Clark

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

I live on the shores of Puget Sound, and I am tired of seeing garbage/sewage wash up on the beach! Every time I see a cruise ship go by, I shudder to think of what they're dumping in our water (the water at our nearby beach park has been tested as unsafe to swim in, due to so many contaminants).

So PLEASE, we DESPERATELY need to make Puget Sound a No Discharge Zone!!! PLEASE!

Sincerely,

Julia Glover

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters. In my view, this is a no-brainer. Toilet contents do not belong in Puget Sound.

When I first came to Seattle in 1963 and lived in a houseboat on Lake Union, I went swimming once. The experience was so disgusting, from toilets that flushed directly into the lake that I certainly never did that again. BUT within a matter of years, Lake Union water quality became a public issue, and the effort to clean it up was started. Some people said it couldn't be done, but the effort turned into a success.

Puget Sound is larger. To make an understatement, there are more challenges, but Puget Sound is truly a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives. If Lake Union could be cleaned up in the 60s, surely Puget Sound can be cleaned up now, so many years later.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Please support the practical step of designating Puget Sound as a No Discharge Zone now! That is a vital action.

Thank you.

Margaret Ellsworth

Sincerely,

Margaret Ellsworth

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Janice Tufte

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Jeanne Martin

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Beverly Mc Neil

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Karen Sauve

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Thomas Samiljan

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Debra Clay

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Laura Hastings

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Zubin Abraham-Ahmed
838 Yakima Ave S

Dear Washington Department of Ecology,

I was born here, in Washington State, and have a vested interest in the beauty and quality of life here. There are too many people and boats now to allow sewage of any kind to be dumped into the water. We depend, all of us, on the health of Puget Sound and should not be treating it as a toilet. Stop the dumping!

Sincerely,

Cynthia Campbell

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Marian Roh

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Sarah Cooke

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

David Dunneback

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Ardell Schwilk

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Gayle Booker

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Rachael Babcock

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Kathleen Gylland

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Patricia Wilson

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Marshall Goldberg

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Judy Williams

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Larry Mahlis

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

I know firsthand the impact of poopy water because I help clean up beaches and see what washes ashore. I've also seen the Norovirus sweep through my community after seeing ships dump their effluent in the water. Keeping the waters clean mean safer beaches and healthier people.

Sincerely,

Jeremiah Donier

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Kenra Brewer

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

David Vonmoos

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Janice White

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

I lived near Puget Sound or beside two of our lakes and have been a boater most of my 79 years. I have seen our waters become increasingly polluted and am concerned about the health of our waters and of the people of this area. We should all care about clean water and the health of our ecosystem, and I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a unique treasure. It is also crucial to the region's economic, cultural and ecological well-being. Let's give it the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Sally Vogel

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Thomasin Levin

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Ruth Allen

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

I've lived my entire life in the Puget Sound area. My family are fishermen, sailors, and appreciate the beauty and bounty that Puget Sound waters provide. As fishermen and sailors, we understand the need to be stewards of the fragile ecosystems that bring salmon and oysters to our table year after year and provide habitat to the orcas, porpoise, harbor seals, otters, osprey, and so many more that make this place we live inspire awe and humble us. We also do not see disposing responsibly of material from the head as any kind of hardship, and feel strongly that it should be considered part of every boater's responsibility. As we see such rapid growth in the region, it is imperative we take action to protect Puget Sound in sensible ways.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Carlos Otero Acevedo

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Toni Sharrard

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Beth O'Brien

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Lara Backman

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,

Savannah Staley

I support a No Discharge Zone for Puget Sound

Dear Washington Department of Ecology,

As a resident of Washington State and someone who cares about clean water and the health of our ecosystem, I am writing to express support for a No Discharge Zone for Puget Sound, Lake Washington and the associated waters.

Puget Sound is a treasure, and one that is crucial to the region's economic, cultural and ecological well-being and should be given the respect it deserves, not the poop it currently receives.

This has been a long time coming! Through years of study and careful analysis, it has been determined that Puget Sound has sufficient vessel sewage pump-out facilities and capacity to support the Puget Sound No Discharge Zone.

Boats with a permanently installed toilet should be required to contain sewage in a holding tank for pump out at a designated facility. The rule does not apply to grey water, i.e. dish or bath water. Fortunately, at least 97% of boaters already operate this way, and Puget Sound residents and users strongly support the No Discharge Zone designation.

We need to address all sources of pollution to Puget Sound so that we can restore its health. Support the practical step of designating Puget Sound as a No Discharge Zone now!

Sincerely,
