Oct 22, 2017

Hello Carrie:

Has been a while, hope everything is fine with you.

Carrie:

Please do not take this letter as any animosity towards you, In my work with you I have enjoyed your pleasant, professionalism in our correspondence. You would do well in the private world of business. My problem is, I am getting so frustrated and concerned with our system of excess government control over our lives.

The reason I am writing is that yesterday it rained all day here. Created puddles of water everywhere on the property. Interestingly absolutely "No" puddling of any water what so ever around the base of our waste concrete pile. The comment in the past has been that when it rains here there must be puddles at the base of the concrete waste pile, implying that we would be lying. Well there was not a single drop of any puddling of water near the concrete pile as we told you, Pam is welcome to come by the property and see for herself.

I used my meter to test for PH levels all over the property in various puddles, including the state highway ditch where water was standing. One amusing test I did was of straight rain water that had collected in a metal container. It tested PH 9, half a point above DOE limit. All the dozen spots I tested were no where near the waste concrete pile. There were two puddles about 100 feet from the waste concrete, they were at a level higher than base of concrete pile, now I assume we all know water does not flow up hill, these tested 8.5 PH. The few puddles I tested at north end of the property,

1000 feet from the crushing and concrete waste pile tested from 8.3 to as high as 9.2 PH. There was a puddle at base of waste asphalt pile that tested 8.3 PH, this is below DOE limits.

Here is an interesting fact.

I have taken (dried and cured concrete washout), tested it to be PH 12. I then have taken 100 year old freshly crushed concrete slabs and blocks, crushed into 1 ¼ inch base crushed materials for use on all private and public construction projects. Tested these new recycled crushed concrete materials, tests exactly the same as the dried cured concrete washout. "PH 12" Have even tested the wet, sludgy, slurry wash out concrete, "It also tests PH 12".

Why are we using the crushed recycle materials when we create a material that now tests PH 12 ????

Is there not a problem here ?

After crushed, tests PH 12, but is now legal to use on all public projects as per, "The New Concrete Recycle Law" ????

"NOW" I am really, really mad about this whole fiasco of the concern of PH levels being high and the idiotic rules, paper work and harassment our government is forcing on the general public. In my extensive studying on the internet and in talking with Cascade Analytical testing lab, it turns out that high or low PH numbers mean nothing per concerns of the environment. Want to let everyone know, I took a sample of our concrete dust from our concrete waste pile in for Cascade Analytical testing lab to give us the PH level of this material, it tested exactly the same as my new testing meter of which I used to test the same material. The meter is the one Pamela Perun required me to purchase. Again athletes drink PH 10 water for energy. My personal knowledge is our government lies to the people of this country in thousands of situations to intentionally create concern and paranoia of the people to then allow more arms of the government to control our lives and create worthless high cost government jobs that drain our pocket books with extra business expenses and tax's. This is exactly how the liberal Democrats want it. They would love the deplorable "Hillary's word" Ha! and zombies to serve as worker bee's with the elites telling them every move to make They have been working at it for the last 40 years, very close to their goal and then along came Trump. He screwed up their game royally. And "BOY" are they spitting mad. We the common sense

hardworking people of this country finally have a President who has the guts to say it the way it is and understand our frustrations of where the country has progressed. We all are crossing our fingers that he can continue the energy with the will to keep doing what he needs to do to get this country back in the hands of the American citizens control. We don't get control back, I assure anyone, the country will continue to go down the rat hole. And for crying out loud, the stupid idiots need to quit worrying about Melania wearing sun class's and high heel shoes, what a stupid waste of time. She is a very classy, confident, successful, hardworking first lady.

Now back to the PH level joke. By the way the Columbia river across the highway from our property test's PH level of 9, there is absolutely no concrete waste piles near it, or high PH water entering it. Even if a little high PH water were to enter the river, within a few feet of flow in the river it will and does neutralize to the exact natural level the river is at.

Reason this is fact, is that I have experimented with concrete sludge that I create by mixing dry concrete dust with water. I place the cup of sludge on shelf where the sludge will settle to the bottom with top half now clear water. Clear water will be on top of the sludge within a very short time. I purposely took a drink of this water and did not croak. The clear water will test PH 12, I guarantee you, I pour this water into a cup half and half with my well water which is a PH level of 8.5. Within one hour the half and half mix drops to PH level of 10, over night it will neutralize to PH level of 8.5, same as my well water, remember it started out at PH 12. It is interesting that one of the statements in the 2016 recycle law, states that 12 PH water seeping down into the earth beneath a concrete waste pile neutralizes back to the neutral PH level of the moisture in the soil of earth within 10 feet vertically. If for some reason PH level would be 12 points upon in filtering a water table of PH 8.5 of which my well water is, (also my well water table is 180 feet down from the surface). So it is impossible for the PH 12 water to reach the water table as it is known), if for some weird reason it did, the PH 12 water will naturalize back to 8.5 at the water table level. The PH 12 water will drop to the 8.5 level over night, same as it happened in my experiment. This is 100% taken care of by the natural ability of the earth to neutralize every single part of the earths surface with absolutely no activity or intervention of the human attempts or factor. We as humans are minuscule to the earths gigantic size. The absolute fact is, we were not here in the beginning and we will not be here in the end, the earth will live on

billions of years beyond our time here on earth. Astronomers estimate there is still 4 billion years of life left in the sun before it burns out. When this happens of course the earth will freeze up into a huge ice ball. Not to worry though, humans will not be here because, before the sun burns out all humans will have destroyed themselves from hate, greed, U.S. medical crisis, (what a mess it is) do not ever take me to a hospital, I do not want to leave a hospital dead, fighting wars and over control by government choking us to death. Low and behold with these writings, I barely made it through 12th grade and proud of it. Have not let myself be confused, over educated, beyond common sense by some liberal professor who received his knowledge from who knows where. "AL GORE" ?????????? Ha !!

I know all this may be causing some of you to roll your eyes because some of you consider yourselves in the elite circle, over educated beyond common sense and know it all. Let us touch on the global warming joke, the earth has warmed and cooled naturally on its own many, many times since it was formed in the universe. "WHO REALLY KNOWS WHEN OR HOW"

The statement by the church that "GOD" created heaven and earth !!! If so then I would guess that he is still controlling every single thing about this earth and how it is turning every single day, including global warming or global cooling. Now personally I think it is a little far fetched. Although some of the people who are reading this are very Christian / Religious, I am simply spiritual with a soul, controlling my own destiny as "GOD" gave me the ability to do. Only problem, it is very hard to do as liberal Democrats hate it.

So my question of this is that you people take it on yourselves to think you should mess with a phenomena created by the "GOD" of the universe ????? You "REALLY" don't think "GOD" is doing it right ????? Ever think you might be stepping on his toes ?

You really believe, AL Gore knows a thing about what he is talking about ?? "What a joke" (Is he God) ???

Want to touch on some lies about tree's creating water in a TV add !!!!!!! The ad is paid for by the Arbor foundation to protect and save all tree's on earth. It goes on about devastating wild fires destroying our forest and all devastated forest need to be replanted and preserved because they are

responsible for and produce all our clean water. "Like the tree's somehow make all our pure clean water". "WHAT A HORRIBLE LIE" to instill into our young people who will never know better because of this. What about the "Deserts" where there are no tree's ???? Where flash floods are created by heavy rain storms and come roaring out across the deserts carrying very muddy water along the way. "NO TREE'S IN SITE AS FAR AS CAN SEE". The fact is every drop of water on this earth has been here since the beginning of the planet earth. The earth has not lost one single drop because of anything on earth. It "CANNOT" be and is "NOT" used up like gas or oil. The natural cycles of earth move the same water all around the globe, "PERIOD" for the past four "BILLION" years. Some of you may have seen this add, it is grossly a bunch of fabricated lies to solicit donations to their scam. Would bet they are a bunch of liberals.

Now the shame and truth of the fact is our government continues to pile more and more rules and regulations on the backs of all the citizens of this supposed free country of "America". We the hardworking entrepreneurs and business people of America, of course are considered the bad guys. So our government hits us with permit fee's for various permits and inspections that go on and on choking us to death.

The governments attitude is, since we are the bad guys they need to keep control of us with permits, inspections, writing up violations on us with fines we are forced to pay.

We have dealt with these people my whole life of 60 years in the construction and rock crushing business. I am 80 years old this coming June 2018.

Now !! I have heard the comments of people saying. Oh !!!! "Just make the contractor pay for it" This is a stupid "Idiotic" statement to make. Does anybody think the contractor is going to eat all these unnecessary government costs that are thrown at him or her. It is always added to the cost of making the crushed materials, building the roads, building the houses, building the supermarkets and on and on. We the contractors who are smart and succeed, also add at least a 20% markup to those extra costs piled on us by our government. Want to guess who pays through the nose for the higher and higher cost of every single thing that is built in America ?

“YOU THE CONSUMER 100%” The funny part is that you the government employees are of these consumers 100%. So in reality you are paying the whole bill and then some. We contractors are not “STUPID” or we would not be in business very long. Remember I have been in it for 60 years, and yes I have made a lot of money off you people who are oblivious as to who in the end pays the whole bill 100%.

THANK YOU.....”Smile”

This above is exactly why these days you the consumer must pay, say an average of \$400,000 for your home to live in. “YOU NEVER GET IT PAYED FOR” because the interest on it eats you up. You also pay income tax and sales tax on the total purchase of the home. The building costs continue to go up and up directly because of the environmental “WACKO’S” and government rules and regulations. This is one thing that Donald Trump has given all us hard workers, the hope and courage to speak up and say it the way it is no matter if you like it or not. “SPIT” and “SPUTTER” I simply do not care. Like our president, (boasting some) “Grin“. I am very smart, wise, hard worker and been around the block many times in my 79 years. No one can pull anything over on me, they try and I will smack them right in the nose. Proudly, I barely made it through the 12th grade, was bored, eager to get on with my life of excitement and adventures, to make my first millions by the time I would be 30 years old.

In this long and exhausting letter, I want to explain that I am not interested in being involved in the work shop, and public hearing this day of November 30th 2017. You have your agenda and foot hold, you are not going to give it up. The only thing that would satisfy me is that DOE be eliminated entirely. The world would do just fine taking care of its self. It truly has for some 4 billion years without DOE. Humans have only been on this earth approximately 200,000 years, a speck on a pin head in time, a blink of an eye, compared to the age of the earth. It is suspected when the huge Asteroid hit the earth in the gulf of Mexico around the time Dinosaurs went extinct the temperature of the earth dropped 47 degree’s worldwide. Evidently the huge Dinosaurs could not pass enough gas to keep the earth warm enough for them to survive. Maybe we now have enough domestic cows, “cattle” in our world, so they can save us by passing enough gas to keep us warm on this planet when the next catastrophic Asteroid hit’s us. One will, as they always have in past life of this planet. It can happen

tomorrow in a split second. It is so obvious, our world of various human minds can be so "Wacko" when they refuse to see the forest for the tree's.

Writing this has been so much fun, is like writing a good fiction novel where I could run amuck, write what ever comes to mind.

Although, here there is a huge difference within this writing, as it is all true, accurate, experiments and happenings with the world evolving to where it is today. "Hey" folks the world is just fine, I do not expect it to spit in half anytime soon. The truth is that it will live on for at least another 4 billion years. Really does not need humans on it to do so.

I have no idea if any of you who are to read this in its entirety, or throw it in the garbage, I simply do not care what you do with it.

I am writing it, because like millions of people, especially like us who put Donald Trump in, as the peoples "PRESIDENT" have been frustrated for many, many years of where our country has been heading and where it is today. "WHAT A MESS". Interestingly I myself predicted 20 years ago we were headed to where we are today in this mess, because of more and more unnecessary government control over our lives from back then.

This letter is being given out to all at this work shop in hopes it will derail any or all attempts to mislead or not stick to the facts of the truth about the fact, waste concrete or waste asphalt is of no danger to the water quality or health of life on this planet per concerns of high PH levels, to any body of water, small or large. Here is a fact, low PH level in the human body, lower than PH 7 means the body is acidic. Now !!! Low PH level is a very serious health concern to humans, means the body is acidic. Cancer cells grow and survive in a human body that is acidic. PH of 7 or higher means the body is in the alkaline state. Cancer cannot and will not be in a human body when the number is 7 and higher. There is a story I tell of my own personal encounter with lung cancer 11 years ago. I learned from and was coached by one of the best nutritionist in the world by transforming my body PH level to the high side, at neutral level of 7 or higher, she stopped my lung cancer in two months, never to come back again as long as I maintain PH levels higher than 7 points. It is directly related to the foods and eating habits we must transform to in order to achieve optimum health. "CANCER FREE" Must use all foods that promote PH levels on the high side, creating our

bodies to be alkaline. Note ! I did not allow Chemo or Radiation to be used on me to interfere with my natural cancer cure. It is a known fact ! If the cancer does not kill you, the chemo and radiation will because it kills and screws up the immune system. Is no way natural to the body, to risk using it, is deadly.

I am to send this letter to Donald Trump. "Americas President"

Our state representative Cary Condotta, (who gets it done).

Frank Kuntz our fantastic mayor, city of Wenatchee, (who also gets it done).

Who all else I may think of.

Upon getting this letter to all I can here today, there is no business here that I care to stick around for.

Thank You all

Heading back home to Wenatchee

To all who have read our letter
per the high PH level hoax.

Nov 9, 2017

Here is additional information gathered during snow and rain storm water at our Rock Crushing property on this date. We also take in waste concrete and legally dried and cured concrete waste wash out to be crushed into recycled construction materials approved by Dept of Ecology.

Well water on property tested PH 8.4

Urine water tested PH 6.9 I drink the PH 8.4 water every day

Steady rain at 6:00 A.M.

Turn to snow at 8:00 A.M.

Snow water / collected from windsheild of my pickup truck. One inch on clean class windshield, so no contamination. "Tested PH 9.6"

All the rain and snow water in puddles throughout property tested PH 9.6, did the testing while it was raining and snowing so it is fresh testing as it fell into the puddles. So ! This means the snow and rain water was PH 9.6 before it hit the ground. "Out of compliance per DOE limits" ??? There was one small puddle formed by the rain and snow, strictly falling from the sky near the concrete waste pile, this tested PH 10. Was not run off from the pile of waste concrete as there was none running down the pile, obvious the rain and snow water was being soaked up by the pile of waste concrete.

When we take any dry crushed concrete waste and mix it with any natural level of PH number water it will test PH 12, what is interesting is that when we add "More" natural water at say PH 9.6, the PH will and does drop to the natural PH number of 9.6 water that is added to the PH 12 water. So !

What this is telling us, when natural rain / snow, what ever the PH of this water might be will and does neutralize and convert the PH 12 water to PH 9.6 if this is the number it is. Could be PH 8.5, then the PH 12 will drop to PH 8.5. "Instantly", does not stay at PH 12 when lower PH water is added to it

Soooo !!!!! What is the problem here, are we in fact being "Bam Boosaled" by our government "AGAIN" to further their own agenda, not caring a ripp about us taxpayers ??? Signed Lloyd L Palm

Lloyd L Palm Construction

Wenatchee Washington, 98801

Here we go again.

Nov 27, 2017

To all who hopefully by now have not pitched all this in the garbage.

Just came to mind, so felt I should address the self testing requirement for PH levels, we are directed to do per our water quality waste concrete permit for recycling of concrete waste.

It is pretty funny and ridiculous to know if this testing is worth two cents or not, to anyone. Especially DOE.

We have a rain or snow storm, DOE assumes we should have puddles at base of our concrete waste pile. We are required to test the puddles for level of PH in the puddles created by supposed rain or snow melt running off the pile.

We are to record PH numbers and send the report to Pamela Perun at DOE. How could anyone know if the numbers are accurate or not when no one from DOE is standing there to witness the testing. They could be just the acceptable numbers written down by the person recording them, would not even need to use the meter, he could just write down numbers DOE needs to satisfy them. Now I can assure anyone, you can bet that I have always written down the accurate numbers because I have nothing to hide or be afraid of.

The numbers I am collecting are accurate, all over the chart, and a lot of fun learning that the whole PH level concern to the environment is a big fat "JOKE".

We send in a couple tests where the number might be PH 12, so what happens ? Oh ! My God we gotta do something. "WHAT" ?????

Here is what we do !!!! We calculate there is say two gallons of PH 12 run off rain water in the created puddle from the waste concrete pile, we simply pour two gallons of my PH 8.5 well water into the puddle and Wha ! La ! All four gallons of water now in the puddle neutralizes to PH 8.5.

Now !!!! The PH level of any water anywhere is a concern to the environment ??? "IT IS A SCAM"

Signed Lloyd L Palm

Quit lying to the public

Nov 27, 2017

I despise liars, the environmental extremists create paranoia by claiming we humans are using up all the water in the world.

All the water in the Ocean has not lowered one drop because of any human use or consumption. "PERIOD".

For the last 4 billion years the same drops of water have always circulated the earth to drop from the skies and nourish the lands over and over, again and again.

Water cannot be used up or worn out, It drops on the soils, collects in the streams, flows into the rivers, on to the Oceans. Rises to the clouds to return to the land and soils over and over billions of times and always will.

Tell the truth to our children. "STOP LYING TO THEM"

Lloyd L Palm Construction

My last comments :

Nov 28, 2017

We are so tired of the paperwork, hassle, and permit costs all across this country of "Ours". U.S.A., does not belong to the government, it is owned by the people, "So far". (How much longer) ??? It is getting scary ! The over bearing, unnecessary, rules and regulations imposed on the business's all across the U.S.A by "OUR" government is strangling us. I came very close to stopping, accepting waste concrete, couple months ago because of the hassle by the system. Carrie : I am sure you remember my writing to you about it.

We really do not need to accept concrete waste to make a living here. We do it because of the extra service to our customers who bring the concrete waste in, then load up crushed materials to take back to their projects. This cuts down on truck traffic on our highways of which we all should know, this is good for the "Environment".

The third "Whammy" is we are converting concrete waste in the environment back to permanent usable materials. Never to become a waste item again. We are very busy crushing our own natural pit run resources here at the quarry. Concrete waste is not easy to crush. "Not a priority", we are set up to crush it as efficiently as anyone in the industry. Our crushers are designed specifically to crush concrete waste, as well as natural pit run materials.

I can be "Ornery" enough to tell the whole messed up system to go take a flying leap to where ever they might end up. "Stop accepting concrete waste". Then there is no operation in the Wenatchee Valley to recycle this valuable "Usable" waste concrete. The only choice left is everyone will be forced to take it to the four separate dump sites both Chelan and Douglas counties have approved for dumping of waste concrete. "In the gullies and meadows". Boy !!!!! "Does this make any sense" ????????? I bet the environmental extremist could have a hay day with this if they were to have brains enough to realize how unnecessary this is for the environment.

Why are the counties doing this ??? With DOE acceptance. Why are not our government agencies leaning to the positive side of sensible concern for the environment ??? "Bazaar to say the least" !!!! "STUPID". When the federal government and state of Washington have made it law that crushed, waste concrete must be used on all public funded projects.

Where I learned all the
Exhausting info

Nov 29, 2017

Ho ! Ho !

Just decided to go buy can of real Coka Cola and a Diet Coke at mini mart.

Tested PH level in both

Real Coca Cola PH 2.6

Diet Coke PH 3.4

Tested Battery acid inside one of our Caterpillar batteries, Tested PH 5.4.

All three of these PH levels do promote and cause cancer.

Of course, obviously the Cokes being the most dangerous, "Anybody drinking Cokes", with a restaurant meal ??? Any good natural Doctor / nutritionist will and can explain this to anyone who cares about their health.

My well water PH 7.3. "Right where it needs to be".

Puddle water in the Gravel Pit, PH 7.0 . "Very healthy"

Rain water off metal roof, PH 6.9

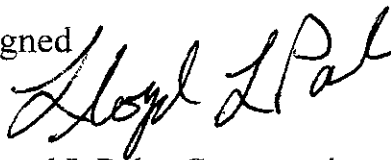

Huge percentage of info in these writings is available on the internet to learn from, but only if a person has the ambition to find it in order to understand the accurate, honest truth.

No need to sit in a college class room, listening to a boring liberal professor teaching Democratic agenda. "Remember" I barely made it through 12th grade. "Smile"

I am "Proudly" self taught with clean, fresh, honest knowledge. Always seeking the truth. "Even if it means stepping on toes along the way"

Whew !!! End of my writings. Are we all not relieved ? "SMILE"

Signed
