

Phyllis Farrell

ASSESSMENT & MONITORING

Assess and monitor water quality of receiving waters along our shorelines

Expand water quantity and quality monitoring for toxics in road runoff

Coordinate with DOT to assess road and highway discharges

CONSTRUCTION & DEVELOPMENT

Increase monitoring and oversight of new construction permits.

Increase LID requirements for new development and redevelopment projects---reduce exemptions

Appendix 1 close the 50% assessed value loophole for redevelopment projects

Increase stormwater retrofit funding & requirements in older and smaller neighborhoods

Retrofit previously exempt smaller developments (ex. Parking lots etc)

Monitor target businesses likely to discharge into county's stormwater systems

PLANNING & COORDINATION

Implement stormwater management action plans with watershed planning

Dovetail permits with Orca Recovery Task Force recommendations

TREATMENT & ENFORCEMENT

Coordinate with DOT to treat road and highway discharges

Take action on Urban Mortality Runoff Syndrome (UMRS) killing coho with stormwater toxics

Protect degraded waters (ex. Deschutes) by preventing permittees from further polluting waters exceeding TMDLs

Need to apply more county resources to address non point pollution entering stormwater runoff (including agriculture runoff)
