

## David Kluttz

I am an aquatic applicator working in Washington, Idaho, Montana.

I have used the 5 lb liquid phycomycin in Idaho Idaho waters with no adverse effects. The same product in a granular formulation ( pak 27) and Phycomycin are registered in Washington. The granular formulations are bulky and difficult to use.

The liquid product can be safely poured and applied in an enclosed system making it safe to apply in my operation. I strongly encourage approval of this product.
