

Tara Felder

I cannot understand the ignorance or hubris of the Trump Administration. On Friday night the U.S. Environmental Protection Agency apparently pulled draft permits that would enable the Department of Ecology to enforce state water-quality standards at federal dams, including temperature.

Is there such total ignorance in Trump's appointees that they fail to recognize basic food-chain and life-or-death relationships that begin with clean water?

Our rivers are the blood of the land. We must do all we can to preserve the pristine quality.

Do not undermine the concerted effort to protect and defend our water resources.
