

~~Weldhuis~~ The Veldhuis Family

City of Bichleton drilled well.
They found it had high Nitration.
Where does this come from.

march 25,
Hessel Veldhuis
Jacob Veldhuis
Anna Veldhuis
Roud Veldhuis

There been fields that we bought throughout the years that been higher nitrogen there then ~~our~~ our ground that we own. Seen field with 1000 pounds of N in the ground. we got it all in order now but it took years without N of our part to do it.

Central Regional Office

It seems like they are targeting us ~~dairyman~~ dairymen to fail.
Where they got all these wells in the valley are all easily next to dairymen. Why not other places.

~~Water~~ water never goes up hill.
So with these wells next to dairies it's easy to point a finger at them instead it could be coming from a few miles away higher up with a vein in the ground

What about all the testwells, we seem in the valley are ground level or below, how is this right.
