I feel that days have been really targeted. yes there is nitrates in the water. How are we gonna find the source? It is easy to point a finger at a farmer that is spreading his cow manure because it stinks. there is so many other sources. So much white and liquid fertilizer that has been used for decades. Are we supposed to take the blame for past farming practices? ~~✱~~

we bought numerous parcels of ground that had high levels of nitrogen. we get monitored heavily. we double crop. I can't explain well enough how much ground we have cleaned up.

what about ALL the sub divisions in the valley? what happened to big open farm ground. All these houses taking up valuable farms. the All have Septics. I hear way to many per Section then there should be.

Our farming ~~community~~ community is afraid to speak up because we Always get targeted. I Agree we need clean water, but figure out where the problem is coming from. don't point the easy finger.
