

Sam Hilde

Why is there such a concern about rural water usage? The total water usage in the rural county is less than 1% of the total amount of water used in the entire county including cities and towns. We rural water users have our own wells and septic systems. The water we use is more than 90% recycled back into the ground. How many cities recycle their water? NONE! This is a ploy to restrict rural land use and to have everyone live in a city. This is about control of our lives.
