

## Cliff Langley

The legislature intended that exempt private wells be allowed 3000 gallons per day and no meters. Why the change. At the meeting you came to in Bellingham we were told that was what you also intended.

I am disappointed. Our government was instituted to secure the rights of the individual. It seems that all it wants is to control.

The fish are not really the issue. If they were we would stop the netting at the mouth of the rivers and stop the taking of roe. If there are no fish getting into the river and if those that do are killed for their eggs how can anyone expect there to be fish in the streams?

Please do what is right for the private well owners, let us have water without unreasonable control. there is no water shortage caused by exempt wells!
