

## Melissa Miner

Please make water conservation a priority.

Please provide information on how much water existing rural residents and businesses could save with rebates for efficient water fixtures

Please tell us the cost per quantity of water saved for each project.

Please don't subsidize rural development with agriculture water projects. Please remove Projects 2 and 26 from consideration.

Please remove expensive, unpredictable projects requiring many permits. Projects 8, 24, and 28 won't be needed if water conservation is prioritized and implemented over the next few years.

Please remove those 3 projects.

Please remove the new section on exemptions. WAC 173-501-074 opens up interruptible rights for Projects 2, 8, 26, and 28. This won't be needed if water conservation is implemented.

Address climate change impact on projects. Please add information on what effect climate change will have on all of the projects.

Reduce water demand. Thank you for reducing withdrawal limits to 500 gallons per day (this is down from 3,000 gallons per day annual average).
