Please consider water conservation first. This is always where the biggest savings is found. Let people know what they could save with efficient water fixtures and techniques.

Remove the new section on exemptions. Projects 2,8,26 and 28 won't be needed if conservation is implemented.

Please add information on what climate change impacts will do to all the projects.

Please don't subsidize rural development with agriculture water projects. Please remove Projects 2 and 26 from consideration.

Please remove expensive permits like 8, 24 and 28 which won't be needed if we prioritize water conservation.

Reduce water demand by reducing withdrawal limits to 500 gallons per day.

Thank you for the opportunity to comment.
