

## James Montonye

WATER WATCHERS (King of Fish pg 235), say at \$9.99K/yr each and one for each of the 9 aggregated sub-basins to pollution test, spot poachers & -- via 1-2 page quarterly reports -- 'pigeonhole key upgrades and keep things whole locally' via NSEA, MRC, PIC, REAL, WCD & WFC farmers, tribes, test for micro-plastics, etc. Plus, prior to fish-blocking culvert remediations & vice con-sumptive guesstimating for wells, they'd monitor river gages & ground water piezometers (most of the latter yet to be sited & dug) looking to effect 'summer flow duration curves via onsite water recharges' from best sub-basins, Bellingham City, and/or 'V-notch weirs in upper drainage exits (only if free of insecticides & bovine nitrates).
