

## Les Pogue Jr.

1. Please develop a system of monitoring that is not based on U.S.Oil or any fossil fuels processing Industry self governing their testing.
2. Department of Ecology must be present @ First flush events to monitor and properly test or verify the test, correct? If so, what happens if the testing determines the presence of contaminants and what levels determine a violation?
3. What are the consequences, if any, when contaminants are in violation?
4. Are silt barriers require, and if so, when are they changed and are they tested for contaminant content? Can the Dept. of Ecology include monitoring outside of what is current in the issuance of the permit? Pertaining the the main refinery & tank farm.
