

## Phillips Burgess Government Relations

Trying to explain to my boss the distinction between the testing / reporting methodology that you want (and are trying to be clear about wanting with the proposed change in section 080) and the testing / reporting methodology that you DON'T want (you used the term "leachate", but as a non-technical person I can only assume that has something to do with bio-availability). Can you share with me an example of someone providing data that you don't want, and a description of what you DO want?
