

Justin Haight

Yesterday, you spoke to Phil Vinditti, a fellow member of Indivisible Tacoma, about this issue. He offered a recap of your conversation:

I had a lengthy discussion with Kerry Graber...Current technology can't clean up 100% o the contamination, she said, but she expects the Dept. of Ecology to enact expectations which take into account the need for Occidental to use more advanced technology when it eventually becomes available.

If this is what you want to communicate to me, then I don't think we need to speak on the phone. I very much appreciate your offer to give clarification on the matter.

Best,

Justin Haight

Mr Graber,

As I understand it, the proposed "solution" for the cleanup of soil and groundwater of the Hylebos Waterway in Commencement Bay cleans only 41% o the pollution Occidental Chemical left.

This is unacceptable.

Occidental made this mess, and should be held responsible for cleaning it up. It is our job to make sure they do. I'm asking for a comprehensive cleanup, and for Occidental to be held accountable for their pollution.

The hundreds of thousands of pounds of cancer-causing chemicals will not only pollute the waters that we have worked so hard to clean up, but will make our people and our ecosystem less healthy.

Please don't accept the currently proposed solution, and demand a comprehensive cleanup, for our health and our water. Thank you.
