

Scott Seydel

We have developed cost competitive, non-PFAS (per- and polyfluorinated substances) coatings for food paper, carton, cup, and linerboard (corrugated) packaging that provide equivalent barriers to oil and water based on traditional KIT, MVTR, and Cobb barrier tests which are being commercially applied. They are produced at our Seydel-Woolley & Company facility in Pendergrass, Georgia. Application information, MSDS, and bulletins are available on our website, and further details and samples are also available as may be needed in evaluating this comment.
