

## Michelle Benetua

As an organization that works with over 80 community groups around Seattle, we are committed to connected, healthy parks and public spaces, including our River. Therefore, we urge General Electric Aviation (GEA) to keep the extraction wells running until all of the harmful chemicals produced by their business are removed! This clean up method should not be allowed to cease unless GEA can demonstrate with absolute certainty that an alternative method is more effective. This is especially important in the Duwamish Valley where health impacts of industry are negative and harmful. Ecology, please do not allow GEA to leave their chemicals in the soil and water.

Thank you,  
Michelle Benetua
