

## Jane Lindley

I support the electrification of transportation, especially as WA transitions from fossil fuels to clean energy. There are some great opportunities including the electrification of the Seattle/Bainbridge ferries, buses and installation of new charging stations to support EV use. The benefits of an EV ferry service include:

- Fuel costs drastically reduced
- Maintenance costs drastically reduced
- Air quality improved (on the ferry and for the region)
- Greenhouse gas emissions drastically reduced
- Fuel spill risk reduced
