Priorities

I think a bus replacement plan would benifet greatly as there are many early 1990 buses still on the road transporting students be it primary routes or sub bus use.

This would help get the highest poluting buses off the road and get cleaner units on the road that the students have to be around. They are the most suseptical to polution with their developing lungs

Disproportionately impacted communities

I think using the funds in the high poluted area is good but all children in all areas are walking past and by there school buses every day, twice a day

General comments

I think the children that ride the buses should get some priority as they do ride lots of older buses that polute the most
