

Edward Cruz

My family and I are frequent visitors to the Tacoma, Puget Sound area. We are strongly opposed to the expansion of the WestRock mill's capacity. In fact, we are appalled at the method of appraising each emission potential IN ISOLATION. It's one thing seeing my neighbor flick a cigarette out of his car; quite another to see one hundred doing it at the same time!

Please deny this expansion, and please consider the proper way to appraise such metrics, for the health and value of the community.

Thank you.
