

Stephanie Detwiler

Please do not allow the use of ANY machinery or processes that would increase pollution levels in any way. We need to protect the precious creatures (including our own children) and the air, land, and water resources of the Puget Sound region ABOVE the needs of industry. I am particularly concerned about pollutants related to the processing of plastics or petrochemicals, as these toxins remain in the environment for many, many years and are known to be dangerous to organisms within our ecosystem.
