

## James Dubois

This proposed project is an improvement to operations and efficiency. Better chip screening means less chemical use and more production. This improves the longevity of the mill and helps improve the job security for the hundreds of people employed at the Westrock Tacoma Mill. The emissions numbers given represent the mill running at full capacity 24/7/365 which does not happen.

Westrock has maintained the long standing relationship with the city and state governments and are committed to improving and lessening their environmental impact. As an hourly employee I implore you to take the impact denying the permits required could have on the employees, their families, and the local economy.
