

Roger Noyes

I am very concerned for the well being of my family, while your Company is allowing plastic and mixtures of other harmful chemicals to be burned and released into the air. I would like you to stop burning any type of materials besides natural woods such as cedar, fir, madrona, etc.... do your employees know the dangers of working for your company? are you able to contain these materials you are burning in a wear-house and completely filtering out the toxins? This is a serious amount of damage you are doing to local wild-life, humans, and farms are being negatively affected within god knows how much of a radius of your facility. Stop This Burning Garbage Nonsense
