

## Andrea del Moral

I strongly oppose the increase of natural gas in the WestRock mill. Ecology must account properly for all WestRock greenhouse gas emissions. You must use most up-to-date science and include life cycle harm from WestRock's climate harming gases. Allowing more greenhouse gas emissions violates Port and City climate policies.

Furthermore, we are living at a time of great urgency and moral responsibility to not only mitigate all consequences from toxins and greenhouse gases, but to create a net negative impact on the atmosphere, reducing our emissions and even pulling gases, such as carbon, back down into the earth.

Before issuing permits, I ask for a Cumulative Health Impact Study, as well as bold and serious consideration of alternatives that would lead the region and country in suitable solutions to fossil fuel use.
