As a resident of Tacoma, and someone who works on the tideflats, I, and my family will be directly impacted by these increases and it will cause a burden to my family that I will not be able to avoid. Please consider the health of me and my children, who don't have a reasonable option to leave Tacoma or find new work, that we will bear the accumulated negative health impacts of these increased air pollution levels in our home.

Thank you for representing the common interest in your work, and for protecting people and the environment from unnecessary harm as a result of chasing short term gains.
