

## Anneliese Simons

I do not support the plan to increase the use of the West Rock Mill's natural gas boiler. We have too much heavy industry that is already pouring contaminants into our air. We do not need more.

West Rock Mill and other companies should be encouraged to use renewable energy sources, such as solar or wind, before increasing their use of fossil fuels.

My health and the health of my community is being threatened by increased output of toxins in our environment. I ask that West Rock Mill and other companies work on decreasing their use of fossil fuels and improving our world for all.
