

Thor Dodson

Please consider carefully the impacts of supporting fossil fuel infrastructure. Not only the direct emissions must be considered--such an action sets a precedent for society and will impact our course. In these dire times, every decision matters and we cannot afford to carelessly burn fossil fuels for profit.

The framework is already in place to adequately analyze the dangers this technology presents--all we need do is apply it. The state of the art in life cycle harm must be considered, and WestRock must be held accountable for what they do to us in the present and future, not only to the environment but to our physical health, especially the children and vulnerable communities.
