

Marilyn Mayers

Ecology must use the most up-to-date science and include the entire life cycle harm from WestRock's climate harming gases. More greenhouse gas emissions would violate both Port and City climate policies. WestRock needs to fully mitigate for ALL current and future consequences from toxins and greenhouse gases. We need a Cumulative Health Impact Study before issuing any permits. We need to move away from further creating fossil-fuel energy infrastructure. The faster we can dismantle the entire plant, the better for Tacoma and the rest of Washington.
