Hello all (particularly Gary) – I do have my first bit of informal feedback on the draft source test manual. I/we did not see references to Method 9B or any 6-minute exception standards in the approved SIP or Ecology’s rules generally. Perhaps I am missing something? Or perhaps that is something you might want to trim on your end (if you want). From a SIP approval standpoint, it is not a big deal, but thought I would ping you just to see if I was misunderstanding something. Thanks!
