

Lisa Johnson

My Husband grew up in Oldtown, ID and Newport, WA area. We have had our home here for twenty four years. We have a small farm and have begun growing much of our own foods - in an attempt to get away from highly processed and chemical laden foods. Our question is about our water, our air and our environment. Whatever biproduct a smelter may or may not expel into the air would pollute all of those things. Our animals, orchards and gardens would be exposed to it 24/7. I am concerned about that. The area that we live in is not an industrial area. This just doesn't seem like an appropriate place for a smelter.
