

Andreas Fischer

I am strongly opposed to putting in an industrial smelter in Newport. Especially a smelter which will have a significant impact on our environment. We are still cleaning up the toxic remnants of Idaho's Silver Valley and the pollution of the Spokane River. In today's Industrial Age, The technology exists for little to zero impact on the environment by industry. Until such a time as there can be zero harm to the environment, industry should not be allowed to build plants that can harm our environment of which we are all a part.
