

Kim Kensok

Our environment is already being contaminated by geoengineering with barium, strontium and nanites...and now there's higher UVC rays from a declining magnetosphere....our immune systems are also severely being challenged by GMOs and Cell towers! Why would we allow a Canadian company to come down here to hurt us? ...Because there is cheaper electricity and apparantly more lax laws about polluting! We can see what the guilty Teck Co. in Trail, BC has done to our Lake Roosevelt, . Its a no-brainer not to let Canadian companies come here to pollute our people and land..trains carrying quartz silica and coal through Pend Oreille County? Its a huge hazard and down-winders will suffer. The Canadian government allows OIL tar sands to pollute, so why don't they put their smelter in Canada? Look what's happened to North Dakota and its oil leaks already! ...big business doesn't care about the people or the land. They only care about profits. Our air quality needs to improve not get worse. Let this company pollute their own country!!!!
