

## Margaret Drummond

My husband and I live at Priest Lake which is in the air shed of rural Eastern Washington, and the proposed PacWest Silicon Metals Smelter. Besides its violation of the Pend Oreille County Comprehensive Plan, the proposed smelter site does not have adequate infrastructure nor ability to contain environmental hazards that may affect the water, soil and air. We don't need this near our populated areas and water sources. The issue about creating jobs is not a factor since the U.S. is near full employment. Please do not allow PacWest to locate its metals smelter here.
