

Jennifer Munizza

Proposed Smelter would:

Have NEGATIVE economic impact by devaluing our real estate, increase health costs due to environmental pollutants, loss of tourism business and cost to taxpayers for eventual clean up and lawsuits.

Decrease quality of life due to air, noise and light pollution, as well as more road and rail traffic.

Worst Placement of such a large-scale polluting industry as it would be located near homes, schools and shops as well as rivers and recreational areas.

How can we possibly tell the future generations that that we let this happen to this beautiful region.
